

## **New CAP: an opportunity for water policies?**

### *EUROPE-INBO Webinar*

**Date :** Monday, november 9th, from 10:30 to 14:30

The Common Agricultural Policy (CAP) plays a key role in supporting Europe's agricultural sector. It is also a more and more important instrument in strengthening the efforts of European farmers to contribute to the environment protection objectives of the EU. After 2020, a new CAP will arise. Amongst the objectives of this future CAP, some directly concern the environment.

This CAP must be implemented in such a way as to encourage the most effective and efficient use of water in agriculture and discourage wasteful use, pollution, etc

In this context of implementing the future CAP and in relation to the WFD objectives and the current state of RBMPs implementation, we organize an online workshop on **“New CAP: an opportunity for water policies?”**

The objective of this workshop is to facilitate exchanges of experiences, questions and solutions on the “CAP and WFD” theme.

First, an introduction part will set-up the scene on the EU and the future CAP, by some representative including a DG-Environment representative.

In a second part, two themes will be investigated during a workshop time in which the participants will be sent in two groups.

You will be able to ask questions to the speakers during the webinar (by chat).

If you have any question, please [contact us](#) !
